**Re: Cache directory: How to reach "c" to "e"**

Its a great Trick to make E as a cache memory, but i **haven't checked and test**. Its a lengthy process. So i am going to make it simple as

- 1) Turn capps off
- 2) Go to Z/private/10202be9 and find 101F8557.txt
- 3) Copy it and paste it on E
- 4) Modify the whole string

0x3 string "d: \ \ cache" 0 cap\_rd = alwayspass cap\_wr = alwaysfail 0x3 string "d: \ \ cache" 0 cap\_rd = alwayspass cap\_wr = alwaysfail  
0x4 string "c: \ \ cache" 0 0x4 string "c: \ \ cache" 0

- 5) Replace d and c with e
- 6) Save the txt file and copy the modified txt file in C/private/10202be9 and Reboot

Thanks OMI for this procedure 🙏

Best Regards

**Re: Cache directory: How to reach "c" to "e"**

😊 I modified c to d 😊 - its faster 😊 and, if reboot, cache automatical deleted 😊
