How To Hack Fw 31.0.015 for n95-8gb By DeltaFoX

How To Hack Fw 31.0.015 for n95-8gb By DeltaFoX

For before thing it needs to establish that version fw you have onboard in the telephone

1) Firmware 30.0.018 or precedents you go to the step 3

2) Firmware 31.0.015 or next

You must effect the downgrade to the before 30.0.18 (you choose the method Box or Phoenix) and then to proceed how much it follows :

3) for the one that has onboard fw 30.0.018 or precedents

a) To install Secman 1.1 Binpda ed hack the phone, or desired method for the hack and to be able or not the capsOFF

b) To install Active File manufacture capabilities

c) To disable the capsoff for the permissions of writing

d) Copy the fileinstallserver.exe whit NPS for O.S. 9.2 (**Attention to Use Only the Modified one And Attached Here**) in E:\ "Memory card".

e) Start Activefile e copy the installserver.exe previously copied on E:\ in :

e1) Y:\SYS\BIN\

make a directory (\SYS\BIN\) obviously before... and Assure you that the files have correctly been copied. **IMPORTANT**

f) Can You now to perform the upgrade now FW to 31.0.015

g) To the first reboot if you want to Install BINPDASec Platform hack.sis but already without you can install whatever appz not signed

Now Enjoy your v31.0.015 hack phone

😊

Download here the necessary file

Code:

http://www.megaupload.com/it/?d=GSJJW82N

or

http://rapidshare.com/files/188267873/Hack_N95-8gb_First_of_all_By_DeltaFoX.rar

Password for the file rar = **DeltafoxOne**

P.S. = For all those that didn't believe me and you have written only idiocies, of the excuses I believe is the least one that you can give me.

I hold to specify that also effecting a deep reset with the 3 buttons or with * #7370# or reflash with a box the hack doesn't go away.. :d

Regards

See You
