c2z Patch Creator by FCA00000 [Updated 11-MAY-08]

This program makes a patch to be used with ROMPatcher. The purpose of this patch is to force the phone to use files in C: before the same file in Z:

```
Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

D:\$Folder\Desktop\c2z>c2z EFSrv.dll
code_addr=F8261598
RFile::Open=F8262B94
jmp to=04 F0 CF FD
low_bits=00000B9E
high_bits=00000004
old_where_jmp=00004BA0
j_session=F8267749
old_where_jmp=F8267749
RFormat::Open=F8265624
where_RFile_Open=1674
where_RFormat_Open=4104
driveCbeforeZ
just4U
real:F826562C - F826576C

D:\$Folder\Desktop\c2z>
```

For example, if you have c:\resource\apps\About.r01
then it will take precedence over z:\resource\apps\About.r01

This is useful to fake Symbian so that it takes your own file, before the original one. As files in C: are read+write, you can modify them.

Instructions:

- From your phone copy the file **z:\sys\bin\EFSrv.dll** to the PC in the same folder where you have c2z.exe and then run **c2z.exe**
- It will generate the file **c2z.rmp**
- Now copy the generated rmp file to your mobile in E:\Patches
- Start ROMPatcher and enable the patch

Which files can be overridden?

At least *.RSC , *.MBM, *.INI, *.R??, *.TXT

Changelog 11.05.08:

- ☹ Now it can replace **z:\resource\versions\sw.txt** & **z:\system\data\swipolicy.ini** and many others. Therefore some of the previous patches are no longer needed.
- ☹ Still can not load some DLLs and EXEs but I am working on it.

On some FP1 phone models, by default the files in C: are used before the same file in Z: If your phone exhibits this behaviour then you don't need this patch. But this might not be true for all files.

[DOWNLOAD](#) (This is a direct link, so you'll always get the latest one)

Kindly ensure that your are using the latest ROMPatcher released on 30-APR-08 from [HERE](#)
